Title Page

Complementary-Filtered Residual World Models for Receding-Horizon Control of Nonlinear Systems

Target journal: International Journal of Control, Automation and Systems (IJCAS)
Status: Author identity, affiliation, and declarations are complete. The public data/code archival identifier remains pending.

Author information

Author and corresponding author: Yongzhi Li
Affiliation: Computer Science and Technology, Wenzhou-Kean University, Wenzhou, Zhejiang, China
Email: 1337958@wku.edu.cn
ORCID: 0009-0008-8642-7385

Statements and Declarations

Funding: The author declares that no funds, grants, or other support were received during the preparation of this manuscript.

Competing interests: The author declares no competing interests.

Ethics approval: Not applicable. This study used numerical simulations and publicly released non-human flight records and involved neither human participants nor animals.

Consent to participate: Not applicable.

Consent for publication: Not applicable.

Data and code availability: Controlled-system trajectories can be regenerated with the differential- equation and experiment code supplied in the reproducibility materials. The external evaluation uses the NanoDrone dataset authors' publicly released, offline-preprocessed flight-state records. Third-party files are not redistributed. A public archival identifier has not been assigned.

Author contributions: Yongzhi Li made the principal contribution to this work and read and approved the final manuscript.

Acknowledgements: The author has no acknowledgements to declare.

Generative-AI assistance and author accountability

Generative AI tools assisted literature screening, manuscript drafting, and software and analysis-script development. The author verified the sources, equations, code, results, and scientific claims, approved the final manuscript, and takes responsibility for its content.
